UNDERGROUND BALL VALVE WITH WELD ENDS

DN 25-125 | PN 25

FULL BORE

INFORMATION

Ball Valve with weld ends

- /// Ball Valves fulfill the requirements of EN 488 and are suitable for the cold laying method
- /// Operating temperature tup to +150 °C
- /// The square key is included int the scope of delivery.
- /// Underground ball valves are delivered unpainted.

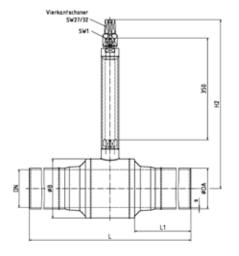

From DN 125:

/// Trunnion mounted ball is standard

MATERIALS

Body	Forged Steel / Steel
Weld Ends	Steel
Ball	Stainless steel
Ball Seals	PTFE
Stem Seals	EPDM

- /// Suitable for steam
- /// Additional extensions for adjusting the overlap height and other accessories can be found on the supplementary sheet: "Accessories for buried ball valves".
- /// For deviating operating conditions please send us a written request stating the fluids, as well as the pressure and temperature range.

ACTUATING ACCESSORIES FOR UNDERGROUND BALL VALVES

The accessories for the Böhmer inground ball valves are designed on a modular principle.

The components can only be mounted in one positioning. The two-flat is used to accommodate additional extensions and slip-on flanges and is always aligned parallel to the pipeline axis. In conjunction with the notch for the ball bore in the square cap, a clear position indicator is thus always visible at the head of the valve in Böhmer inground ball valves.

1200	439.598	0.01	1200/1000	82.375	0.22

The drag coefficients were determined for ball valves with solid balls.

Hollow balls cause more resistance and thus result in higher drag coefficients. In order to determine the exact losses, it is necessary to distinguish between trunnion-mounted and floating hollow balls.

Since the use of trunnion-mounted balls depends partly on the operating pressure, it is not possible to determine generally-valid drag coefficients for hollow balls as a function of nominal sizes.

The following are drag coefficients of butterfly valves based on approximate figures according to Dubbel:

DN 50: $\zeta = 1.4$ Kv=85 DN 200: $\zeta = 0.8$ Kv=1.790 DN 500: $\zeta = 0.63$ Kv=12.613

TECHNICAL INFORMATION

Wall thicknesses for ball valves for underground installation

The pipe ends used for BÖHMER inground district heating ball valves comply with the requirements of AD-Merkblatt B9 for the necking of pipes. Necking for drain and vent lines can be carried out on these pipes without falling below the minimum

wall thickness requirements of EN488. The following wall thicknesses refer to the pipe material used. These are machined at the weld preparation by wall thickness adjustment.

DN	20	25	32	40	50
Pipe dimensions	26,9 x 3,2	33,7 x 3,2	42,4 x 3,2	48,3 x 3,6	60,3 x 3,6
DN	65	80	100	125	150
Pipe dimensions	76,1 x 4,0	88,9 x 4,5	114,3 x 4,5	139,7 x 4,5	168,3 x 5,0
DN	200	250	300	350	400
Pipe dimensions	219,1 x 6,3	273,0 x 7,1	323,9 x 8,0	355,6 x 8,0	406,4 x 8,8

Flange dimensions

For all ball valves the standard for flange connections EN1092 is complied with. Below you will find an overview of the flange connection dimensions for pressure ratings PN10 - PN40, which

were not listed in the data sheets for reasons of clarity. The flange sheet thicknesses may deviate upwards from the dimensions required in the standard for manufacturing reasons.
